SUMMARY

Applied AI / ML engineer with 8+ years of experience, starting in data science and evolving toward building production AI systems. My background is in statistical modeling, large-scale data processing, and delivering ML solutions grounded in real-world data.

WORK EXPERIENCE

INVISIBLE TECHNOLOGIES, remote
Senior Applied AI Engineer

May 2025 - Present

- Built and shipped a multi-agent LLM system (LangGraph) enabling natural language interaction with enterprise data (planner, data scientist, KPI, and dashboard agents).
- Designed tool-augmented agents (Text2SQL) integrating structured data access via FastAPI-based MCP servers.
- Developed RAG pipelines at scale (700+ tables) using AstraDB and Milvus, replacing prompt-based approaches with retrieval-driven systems.
- Implemented evaluation frameworks for RAG systems (RAGAS) to measure retrieval and answer quality.
- Led development of an ontology-driven framework mapping business use cases to enterprise data schemas, enabling automated KPI discovery and query generation.
- Developed data pipelines (PySpark, Databricks Jobs) for computer vision outputs
- Collaborated with engineers and forward-deployed teams to productionize systems; contributed to code reviews and technical design.

OMNISCIENCE STRATEGIES CORPORATION, CA
Director of Data Science

July 2023 - Dec 2024

- Development of Virtual Agents for life insurance and Medicare insurance sales and form filling for a new venture spinout to tackle.
- Evaluation of LLM technologies for a large fintech company in the financial education space, working on RAG, Security and Compliance, Prompt Optimization, and Voice.
- Designed an AI roadmap for a large mid-western medical claims and billing management company around transforming customer experience and operational efficiency.
- Conducted a workshop around advanced applications of AI in Risk Management for a top 10 North American bank.

ENTEFY, Palo Alto, CA
Senior Data Scientist

Jan 2023 - July 2023

- Engineered and implemented models for bitcoin prediction and search query understanding.
- Created and deployed models to extract instructed data from documents.
- Developed and deployed OCR pipeline.

OMNISCIENCE, Palo Alto, CA
Lead Data Scientist

October 2017 - June 2022

- Designed, optimized and deployed models (triage and classification) for Life Insurance Underwriting Automation, providing the customer capacity to drive 33% growth business without changing to underwriting team.
- Developed supervised machine learning model for a data aggregation platform (800M+ rows dataset) for a worker compensation insurance, achieving 90% business matches rates and 88% fill rates for key fields.
- Built classification models for loan mortgages for a north American bank, scoring 96% accuracy without using PII data.
- Implemented predictive model capabilities for US Customs and Borders Protections for their Global Travel Assessment system to identify threats.
- Prototyped machine learning models for the Sales team, showcasing use cases of internal OCR system.

- Collaborated to internal RiskOPs product development, improving internal data scientist productivity.
- Coordinated evaluations with data providers.
- Mentored team, created robust process resulting in constant inflow of PhDs from Stanford and Caltech.

KENT STATE UNIVERSITY, Kent, OH
Senior Research Scientist

April 2008 – September 2016

- Managed software for the Silicon Strip Detector, responsible for developing and maintaining code for raw data evaluation.
- Analyzed particle identification data from the STAR experiment at Brookhaven National Laboratory using machine learning algorithms.

EDUCATION

Ph.D. in Nuclear Physics, University of Nantes, France, October 2007

SKILLS

- Key Competencies: Machine Learning, Data Analysis and Visualization, Mentoring, Communication
- Machine Learning Platforms: TensorFlow, PyTorch, Scikit-Learn
- AI systems: LLM's, RAG, Multi-Agent Systems, Evaluation
- Cloud Platforms: AWS, Google GCS
- Backend: Python, FastAPI
- Databases: MongoDB, SQL
- Libraries / tools: Numpy, Pandas, Spark, LangGraph
